Risks at sampling date		Trisomy 21	
Age risk	1:1014	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1332 women with the same data, there is one woman with a trisomy 21 pregnancy and 1331 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Biochemical T21 risk	1:315		
Combined trisomy 21 risk	1:1332		
Trisomy 13/18 + NT	1:5092		
		Trisomy 13/18 + NT The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:5092, which represents a low risk.
