FETAL GROWTH PARAMETERS

- CRL 58.6 mm ~ 12 wks 3 days of gestation.
- Estimated gestational age is 12 weeks 3 days (+/- 1 week). EDD by USG : 21.06.2025

Suggest : Clinical , biochemical correlation , SOS & further workup , follow up at 19-20 weeks for target scan for detailed fetal anomaly screening.

Declaration : I have neither detected nor disclosed the sex of the fetus to pregnant woman or to anybody. (It must be noted that detailed fetal anatomy may not always be visible due to technical difficulties related to fetal position, amniotic fluid volume, fetal movements, maternal abdominal wall thickness & tissue echogenicity. Therefore all fetal anomalies may not be detected at every examination. Patient has been counselled about the capabilities & limitations of this examination.)
