Risk		Trisomy 21	
The chart shows a red area at the top (above cut-off), a yellow area in the middle (below cut-off but above age risk), and a green area at the bottom (below cut-off). A vertical line at age 27 indicates the patient's age risk.		The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!	
Trisomy 13/18			
The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.
