

Prisca 5.1.0.17
Date of report: 22-01-2025

NA

Patient data			
Name	Mrs. A RENUKA FETUS-B	Patient ID	0352501210030
Birthday	01-03-2005	Sample ID	A1175575 FETUS-B
Age at sample date	19.9	Sample Date	21-01-2025
Gestational age	13 + 1		
Correction factors			
Fetuses	2	IVF	no
Weight	57	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	11.15 mIU/mL	1.12	
fb-hCG	176.76 ng/mL	2.24	
Risks at sampling date			
Age risk		1:1112	
Biochemical T21 risk		1:1256	
Combined trisomy 21 risk		1:5888	
Trisomy 13/18 + NT		<1:10000	
			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 5888 women with the same data, there is one woman with a trisomy 21 pregnancy and 5887 women with not affected pregnancies. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
