

Prisca 5.1.0.17
Date of report: 29-01-2025

NA

Patient data					
Name	Mrs. RAJALAXMI BEHERA		Patient ID	0652501280219	
Birthday	25-06-1995		Sample ID	a1321928	
Age at sample date	29.6		Sample Date	28-01-2025	
Gestational age	13 + 1				
Correction factors					
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	
Weight	70	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	13 + 1	
PAPP-A	4.18 mIU/mL	1.00	Method	CRL Robinson	
fb-hCG	8.03 ng/mL	0.24	Scan date	28-01-2025	
Risks at sampling date			Crown rump length in mm		
Age risk	1:692		71.9		
Biochemical T21 risk	<1:10000		Nuchal translucency MoM		
Combined trisomy 21 risk	<1:10000		1.06		
Trisomy 13/18 + NT	<1:10000		Nasal bone		
			present		
			Sonographer		
			NA		
			Qualifications in measuring NT		
			MD		
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The free beta HCG level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
