

Name	MINAKSHI DUBEY	Age	055Y - F
Date	30/01/2025	Patient Id	30012506
Referring Doctor	DR SWATI PAWDE	Center	DIAGNOPEIN NAGPUR

CEMRI OF PELVIS

PROTOCOL:– MRI was performed with Siemens 1.5 Tesla MRI system with multiple sequences was taken in multiple planes.

OBSERVATIONS:

UTERUS

Uterus appear normal measures 73x 34 x 43 mm (APX TRA X CC).

Junctional zone appear normal

No SOL or mass lesion .

Endometrial cavity appears normal

ADNEXA:

- **Left adnexa shows a large 13X9X8CM complex appearing lesion with larger cystic areas as well as eccentric soft tissue component an small internal nodular areas within cystic areas also noted within**
- **the larger cystic component shows eccentric nodular small enhancement with the nodular soft tissue also shows heterogeneous enhancement**
- **This appears to be malignant ovarian neoplastic lesion histopathological correlation SOS**
- **Bilaterally abutting bilateral vessel lower ureter with preserved fat plane with no encasement**
- **posteriorly abutting the left lateral aspect of uterus**

Urinary bladder appears normal. No calculus, mass or diverticulum is seen.

Pelvic small bowel loops and rectum appear normal.

No definite enlarged iliac or pelvic group of lymphnodes seen.

Iliopsoas and bony pelvis appear normal.

No free or loculated pelvic fluid collection is seen.

IMPRESSION:

Left adnexa shows a large Complex appearing lesion with larger cystic areas as well as eccentric soft tissue component and small internal nodular areas within cystic areas also noted within

This appears to be malignant ovarian neoplastic lesion histopathological correlation SOS
