Disclaimer: Patient identity is based on her own declaration. This investigation is done as per the request of the referring doctor. Proper history with details of previous scan/medical history are to be provided. In spite of utmost care taken, all measurements are subjected to statistical variations. Diagnosis of ultrasound is based on various echos and shadows produced by both normal and abnormal tissues. Disparity in diagnosis can occur due to technical pitfalls like false positive and false negative results. In case of disparity between report and clinical evaluation and/or laboratory tests, second opinion is always advisable before commencing treatment. Not for medico-legal purpose.
