

Prisca 5.1.0.17
Date of report: 06-02-2025

NA

Patient data				
Name	Mrs. KOMIN SHAHU, FETUS - A		Patient ID	0372502050134
Birthday	17-02-2002		Sample ID	A1551226 FETUS-A
Age at sample date	23.0		Sample Date	05-02-2025
Gestational age	12 + 4			
Correction factors				
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies
Weight	47	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	12 + 2
PAPP-A	11.25 mIU/mL	1.13	Method	CRL Robinson
fb-hCG	128.63 ng/mL	1.32	Scan date	03-02-2025
Risks at sampling date			Crown rump length in mm	60
Age risk	1:1033		Nuchal translucency MoM	1.26
Biochemical T21 risk	1:4391		Nasal bone	present
Combined trisomy 21 risk	1:7891		Sonographer	NA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD
Risk			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 7891 women with the same data, there is one woman with a trisomy 21 pregnancy and 7890 women with not affected pregnancies. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
