

Prisca 5.1.0.17
Date of report: 06-02-2025

NA

Patient data			
Name	Mrs. RINKI GUPTA	Patient ID	0582502060001
Birthday	20-04-1995	Sample ID	a2170248
Age at sample date	29.8	Sample Date	06-02-2025
Gestational age	12 + 4		
Correction factors			
Fetuses	1	IVF	no
Weight	63	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	3.38 mIU/mL	0.89	
fb-hCG	27.45 ng/mL	0.67	
Risks at sampling date			
Age risk	1:663	Gestational age	12 + 3
Biochemical T21 risk	1:7442	Method	CRL Robinson
Combined trisomy 21 risk	<1:10000	Scan date	05-02-2025
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	60.9
		Nuchal translucency MoM	1.29
		Nasal bone	present
		Sonographer	NA
		Qualifications in measuring NT	MD
Risk		Trisomy 21	
The graph shows a risk curve that increases with age. The patient's risk at 12+4 weeks is indicated by a black bar at the bottom, below the green area.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
