

Prisca 5.1.0.17
Date of report: 06-02-2025

NA

Patient data			
Name	Mrs. SHITAL DIGHALE		Patient ID
Birthday	07-07-2005		Sample ID
Age at sample date	19.6		Sample Date
Gestational age	12 + 3		
Correction factors			
Fetuses	1	IVF	unknown
Weight	45	diabetes	unknown
Smoker	unknown	Origin	Caucasian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.29 mIU/mL	0.72	12 + 2
fb-hCG	39.5 ng/mL	0.87	Method
			CRL Robinson
			Scan date
			04-02-2025
Risks at sampling date			Crown rump length in mm
Age risk			60
Biochemical T21 risk			Nuchal translucency MoM
1:1090			1.60
Combined trisomy 21 risk			Nasal bone
1:4493			present
Trisomy 13/18 + NT			Sonographer
<1:10000			NA
			Qualifications in measuring NT
			MD
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2203 women with the same data, there is one woman with a trisomy 21 pregnancy and 2202 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
