

Prisca 5.1.0.17
Date of report: 13-02-2025

N A

Patient data			
Name	Mrs. V LAVANYA		Patient ID
Birthday	18-07-1996	Sample ID	0012502120383
Age at sample date	28.6	Sample Date	A1900082
Gestational age	11 + 2		12-02-2025
Correction factors			
Fetuses	1	IVF	no
Weight	61	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.85 mIU/mL	1.73	11 + 2
fb-hCG	12.08 ng/mL	0.22	Method
			CRL Robinson
			Scan date
			12-02-2025
Risks at sampling date		Trisomy 21	
Age risk	1:720	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The free beta HCG level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Biochemical T21 risk	<1:10000		
Combined trisomy 21 risk	<1:10000		
Trisomy 13/18 + NT	<1:10000		
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
