**Opinion:**

- Single viable intrauterine fetus with variable presentation at the time of examination.
- The average sonic maturity of fetus corresponds with 11 weeks 02 day

Declaration:- I have neither detected nor disclosed the sex of the fetus of pregnant women to anybody as laid in rule 10 (1A)

Note :- 1) This is a Professional Opinion only and not the final Diagnosis.

- 2) No ultrasonography finding is pathognomonic, all findings are only suggestive, hence they should be reviewed with the relevant clinical examination & relevant investigations before embarking upon the final Diagnosis and proceeding for Management (Medical or Surgical)
- 3) Not all gross congenital anomalies of fetus are apparent during scanning due to difficult & variable position attained by the fetus. Hence this USG scan cannot exclude all gross congenital fetal anomalies. Fetal cardiac anomalies are not included, ask for fetal echocardiography whenever suspected.
- 4) Whenever suspect congenital anomalies, ask for targeted scan along with serum alpha fetoprotein estimation.
- 5) In case of Disparity between clinical and Sonographic/X-ray findings, please send patient again for review.
- 6) This report is not valid for medico legal purposes.
- 7) Subject to Nagpur Jurisdiction only.
