Risk		Trisomy 21	
		The calculated risk for Trisomy 21 is above the cut off which represents an increased risk. After the result of the Trisomy 21 Test, it is expected that among less than 50 pregnancies with the same data, there is one trisomy 21 pregnancy. The free beta HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!	
Trisomy 13/18			
The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.
