

Prisca 5.1.0.17
Date of report: 19/03/25

N A

Patient data			
Name	Mrs. MAMATHA	Patient ID	0312503170024
Birthday	14/11/05	Sample ID	A0938210
Age at sample date	19.3	Sample Date	17/03/25
Gestational age	11 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	68	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	2.42 mIU/mL	0.94	Method
fb-hCG	32.72 ng/mL	0.70	Scan date
			17/03/25
			Crown rump length in mm
			54
			Nuchal translucency MoM
			1.81
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risks at sampling date			
Age risk	1:1071		
Biochemical T21 risk	<1:10000		
Combined trisomy 21 risk	1:2638		
Trisomy 13/18 + NT	<1:10000		
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2638 women with the same data, there is one woman with a trisomy 21 pregnancy and 2637 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
