### Triple Infection Rapid (HIV, HBSAG, HCV) SEROLOGY

Test Name With Methodology	Result	Unit	Biological Ref.Interval
<b>HIV I &amp; II Serology (Rapid)</b> HIV I & II (Rapid) <small>Serum,Rapid immunochromatographic</small>	Non Reactive		Non Reactive

#### Comments:

This test is used for the differential detection of HIV-1 & HIV-2 antibodies (IgG) in human serum or plasma using HIV-1 & HIV-2 .the test is a screening test for anti HIV-1 and HIV-2. A positive test indicates HIV-1/HIV-2 presence HIV-1 & HIV-2 antibodies (IgG).this indicates HIV-1/HIV-2 infection but needs to be further confirmed.

**\*Results relate only to the sample, as received**

***This is only a screening test. All samples detected reactive must be confirmed by using HIV Western Blot.*** Therefore for a definitive diagnosis, the patient's clinical history, symptomatology as well as serological data, should be considered. The results should be reported only after complying with above procedure.

### HBsAg (Rapid)

HBSAG (Rapid)

Serum, Rapid immunochromatographic

Non Reactive

Non Reactive

#### Comments :

This screening test is used to detect Hepatitis B surface antigen (HBsAg). HBsAg is a protein antigen produced by Hepatitis B virus (HBV). This antigen is the earliest indicator of acute hepatitis B and frequently identifies infected people before symptoms appear. HbsAg disappears from the blood during the recovery period. Positive report indicates HBV infection, this needs to be further confirmed with ELISA or Real time PCR.

### Hepatitis C virus (HCV Rapid)

HCV (Rapid)

Serum, Rapid immuno chromatographic

Reactive

Non Reactive

#### Comments:

The test is a qualitative screening assay for antibodies to HCV. This is only a screening test. The test does not rule out HCV infection because the antibodies may not be present in sufficient quantity to be detected at a very early stage of infection. The results obtained must be confirmed by other diagnostic procedures and clinical data.

**Remark: Positive or Reactive results should be confirmed with alternative testing methods (like HCV PCR) and clinical findings before a diagnostic decision is made.**

## Terms & Conditions

- The reported results are for the information of the referring doctor and should be correlated to clinical diagnosis.
- In case of insufficient quantity or poor quality of specimen test will not be performed. In such cases it is expected that fresh specimen is sent for reporting of the same parameter.
- There may be circumstances beyond our control that can delay results, e.g., invalid assay run.
- The results of a laboratory test are dependent on the quality of the sample as well as the assay procedure.
- The report is to be interpreted and used by medical personnel only.
- This reports is not intended for medico-legal purpose.
- Assays are performed in accordance with standard procedures. Results may vary from time to time and from lab to lab for the same parameter for the same patient. The reported results are dependent on individual assay method or equipments used and quality of specimen(s) received. Investigations have their limitations and isolated laboratory investigations may not confirm the final diagnosis of disease. They only assist in arriving at diagnosis in conjunction with clinical presentation and other related investigations.
- For the test performed on specimens received or collected from different locations, it is presumed that the specimen belongs to the patient named or identified as labeled on the container/test request form and such verification has been carried out at the point of generation of the said specimen by the sender.
- Accuprobe will be responsible only for the analytical part of the test carried out. All other responsibility will be of referring Laboratory.
- If any dispute arising in future party can file the suit in the court of law with the jurisdiction within Delhi jurisdiction only.
