

Prisca 5.1.0.17
Date of report: 27-03-2025

N A

Patient data						
Name	Mrs. DAMINI BAGHMARE		Patient ID	0372503240079		
Birthday	05-04-2000		Sample ID	A1506974		
Age at sample date	25.0		Sample Date	24-03-2025		
Gestational age	10 + 5					
Correction factors						
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies		
Weight	45	diabetes	no			
Smoker	no	Origin	Asian			
Biochemical data			Ultrasound data			
Parameter	Value	Corr. MoM	Gestational age	11 + 0		
PAPP-A	2.74 mIU/mL	1.17	Method	CRL Robinson		
fb-hCG	43.88 ng/mL	0.65	Scan date	26-03-2025		
Risks at sampling date			Crown rump length in mm			
Age risk	1:897		44			
Biochemical T21 risk	<1:10000		Nuchal translucency MoM			
Combined trisomy 21 risk	<1:10000		0.82			
Trisomy 13/18 + NT	<1:10000		Nasal bone			
			present			
			Sonographer			
			N A			
			Qualifications in measuring NT			
			MD			
Risk			Trisomy 21			
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT						
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
