Risk		Trisomy 21	
The chart shows a risk curve that increases with age. The green region is below the curve, the yellow region is between the curve and a horizontal line at 1:1000, and the red region is above 1:1000. A horizontal line at 1:1000 is labeled 'Cut off'. The patient's risk at 27.1 weeks is indicated by a black bar in the green region.		The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 3812 women with the same data, there is one woman with a trisomy 21 pregnancy and 3811 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!	
Trisomy 13/18			
The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.
