DIGITAL X-RAY, SONOGRAPHY &
COLOR DOPPLER (2D-ECHO) CLINIC

IMAGING
CENTRE

*Multislice CT ▶ Laser DPG ▶ Sonography ▶ Colour Doppler ▶ Digital X - Ray

Name : MR. PRADEEP MAHALKAR
Ref By : Dr. O G MUNDHADA (M.S.Mch)

Age/Sex : 54 YEARS/M
Date : 01 Feb 2025

USG -SCROTUM (COLOR DOPPLER)

Real time Sonographic examination performed by 5 to 9 Mhz transducer shows:

Right scrotal sac:

Right testis is normal in morphology & shows homogenous echo-pattern. No evidence of any focal cystic or solid lesion seen in testicular parenchyma.

Right Testis: 45x18 mm.

Right epididymis is normal in morphology & echopattern. The head, body and tail of epididymis are normal.

A 2.1x2.1x1.7cm hypoechoic extratesticular mass with calcified wall is noted near upper pole right testis. There is no evidence of collection in tunica vaginalis.

Left scrotal sac:

Left testis is normal in morphology & shows homogenous echo-pattern. No evidence of any focal cystic or solid lesion seen in testicular parenchyma.

Left Testis: 36x27 mm.

Left epididymis is normal in morphology & echopattern. The head, body and tail of epididymis are normal.

No focal or diffuse lesion seen. There is no evidence of collection in tunica vaginalis.

No varicocele.No hydrocele.

CONCLUSION:

- A 2.1X2.1X1.7CM WELL DEFINED HYPOECHOIC EXTRATESTICULAR MASS WITH CALCIFIED WALL IS NOTED NEAR UPPER POLE RIGHT TESTIS.? INFLAMMATORY MASS OR MESENCHYMAL IN ORIGIN

Thanks.
