Date of report: 20/04/25

NA

Patient data			
Name	Mrs. SRIVIDHYA		Patient ID 0012504190249
Birthday	26/08/99		Sample ID B2677027
Age at sample date	25.6		Sample Date 19/04/25
Gestational age	11 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	48	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age 11 + 6
PAPP-A	3.2 mIU/mL	0.83	Method CRL Robinson
fb-hCG	46.67 ng/mL	0.89	Scan date 19/04/25
Risks at sampling date			Crown rump length in mm 53.7
Age risk	1:910		Nuchal translucency MoM 0.84
Biochemical T21 risk	1:4867		Nasal bone present
Combined trisomy 21 risk	<1:10000		Sonographer NA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT NA
Risk			Trisomy 21
The graph shows a risk curve that starts at approximately 1:1000 at age 13 and increases to about 1:100 at age 49. A horizontal line at 1:10000 represents the cut-off. The area below this line is divided into green (below cut-off) and yellow (below cut-off but above age risk) regions. A black vertical bar is positioned at age 25, indicating the patient's risk level is below the cut-off.			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
