

Prisca 5.1.0.17
Date of report: 22-04-2025

N A

Patient data			
Name	Mrs. ARUNA		Patient ID
Birthday	22-04-2002		Sample ID
Age at sample date	23.0		Sample Date
Gestational age	11 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	47	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.06 mIU/mL	0.29	11 + 5
fb-hCG	49.85 ng/mL	0.91	Method
			CRL Robinson
			Scan date
			21-04-2025
Risks at sampling date			Trisomy 21
Age risk			1:1000
Biochemical T21 risk			1:287
Combined trisomy 21 risk			1:1847
Trisomy 13/18 + NT			<1:10000
			Crown rump length in mm
			52
			Nuchal translucency MoM
			0.86
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1847 women with the same data, there is one woman with a trisomy 21 pregnancy and 1846 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
