Patient data			
Name	Mrs. PRIYANKA	Patient ID	0012504240246
Birthday	30-09-1998	Sample ID	A2080869
Age at sample date	26.6	Sample Date	24-04-2025
Gestational age	12 + 4		
Correction factors			
Fetuses	1	IVF	no
Weight	60	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.74 mIU/mL	0.43	12 + 4
fb-hCG	39.76 ng/mL	0.96	Method
			CRL Robinson
			Scan date
			24-04-2025
			Crown rump length in mm
			64.7
			Nuchal translucency MoM
			2.30
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risks at sampling date			Trisomy 21
Age risk		1:886	The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 Test (with nuchal translucency), it is expected that among less than 50 pregnancies with the same data, there is one trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Biochemical T21 risk		1:756	
Combined trisomy 21 risk		>1:50	
Trisomy 13/18 + NT		1:91	
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is 1:91, which represents an increased risk.
