LMP 26-01-2025 LMP GA 12 weeks 4 days LMP EDD 02-11-2025

USG OBSTETRICS N T SCAN

A Single live intrauterine foetus seen .

Fetal movements and Cardiac pulsations are well appreciated

CRL measures 6.0, cm BPD 1.7 cm corresponding with gestational age of
12 Weeks 3 days

EDD- 03-11-25

Nuchal Thickness measures 1.0 mm and appears normal

Intracranial translucency appears normal

Nasal bone and retronasal triangle seen

Bladder and stomach bubble seen

All four limbs with spontaneous movements seen

Flow across Ductus Venosus and tricuspid valve appears normal

PTO

Both uterine arteries show normal diastolic flow

Right Uterine artery PI 2.10 Left Uterine artery PI 2.20 Mean PI 2.15

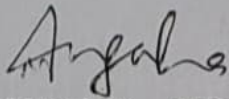

Percentile 87 (Ref percentile: fetal medicine Barcelona)

IMPRESSION-Single live intrauterine foetus of MGA 12 weeks 3 days

I, Dr Naveen Pugalia declare that while conducting USG, I have neither detected nor disclosed sex of foetus to anybody in any manner

All measurements including estimated fetal weight are subject to statistical variations

Not all anomalies can be detected on sonography. Detection of anomalies is dependent on fetal position, gestational age, maternal abdominal obesity and other technical parameters. Follow up scanning and second opinion are always advisable. For detection of cardiac anomaly foetal echo is necessary. Chromosomal anomalies need chorionic villus sampling for diagnosis

DR. NAVEEN PUGALIA MD.
