

Prisca 5.1.0.17
Date of report: 26/04/25

N A

Patient data			
Name Mrs. BHAGYASHREE DHURVE		Patient ID 0372504250095	
Birthday 07/08/99		Sample ID B2404552	
Age at sample date 25.7		Sample Date 25/04/25	
Gestational age 11 + 4			
Correction factors			
Fetuses 1	IVF no	Previous trisomy 21 pregnancies unknown	
Weight 63	diabetes no		
Smoker no	Origin Asian		
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age 11 + 4
PAPP-A	0.3 mIU/mL	0.12	Method CRL Robinson
fb-hCG	49.5 ng/mL	0.98	Scan date 25/04/25
Risks at sampling date			Crown rump length in mm 50
Age risk 1:896			Nuchal translucency MoM 0.82
Biochemical T21 risk 1:70			Nasal bone present
Combined trisomy 21 risk 1:523			Sonographer N A
Trisomy 13/18 + NT 1:118			Qualifications in measuring NT MD
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 523 women with the same data, there is one woman with a trisomy 21 pregnancy and 522 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:118, which represents a low risk.
