

Prisca 5.1.0.17
Date of report: 26/04/25

N A

Patient data			
Name	Mrs. AFSANA PARANDE		Patient ID
Birthday	26/11/99	Sample ID	B2666048
Age at sample date	25.4	Sample Date	25/04/25
Gestational age	11 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	49	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.3 mIU/mL	0.42	Method
fb-hCG	51.2 ng/mL	0.90	Scan date
			24/04/25
			Crown rump length in mm
			47
			Nuchal translucency MoM
			4.05
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risks at sampling date		Trisomy 21	
Age risk	1:905	The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 Test (with nuchal translucency), it is expected that among less than 50 pregnancies with the same data, there is one trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Biochemical T21 risk	1:842		
Combined trisomy 21 risk	>1:50		
Trisomy 13/18 + NT	>1:50		
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is >1:50, which indicates an increased risk.
