## HISTOPATHOLOGY

Histopathology (Medium)

SECTION NO.

: LL217/25

SPECIMEN

: RT. HUMEROUS HEAD IOPSY

GROSS EXAMINATION

: Received in formalin few irregular grayish brown hemorrhagic soft tissue pieces labelled as from right head of humerus . Whole tissue processed.

MICROSCOPIC EXAM.

: Stained section examined shows an invasive epithelial malignancy arranged in tubules glands and focal solid pattern . Individual cells are mildly pleomorphic with increased nucleo-cytoplasmic ratio , vesicular chromatin and occasional prominent nucleoli . Interspersed thin walled capillaries with focal perivascular arrangement is noted . Few dilated follicles containing eosinophilic material is seen . Mitosis is evident .

IMPRESSION

: MALIGNANT EPITHELIAL NEOPLASM

Adv

: Clinico-radiological correlation & IHC for definitive typing .

COMMENT

: \*SLIDES AND PARAFFIN BLOCKS OF TISSUES PROCESSED AT THE LIFELINE LABORATORY , LUCKNOW WILL BE STORED FOR ONE YEAR.\*TISSUE SPECIMEN RECEIVED AT THE THE LIFELINE LABORATORY, LUCKNOW WILL BE DISCARDED FOUR WEEKS AFTER FINAL REPORT.

End of Report
