Patient data				
Name	Mrs. V PRANAYA		Patient ID	0012505140264
Birthday	20/01/96		Sample ID	A1902686
Age at sample date	29.3		Sample Date	14/05/25
Gestational age	12 + 5			
Correction factors				
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies
Weight	48	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	12 + 5
PAPP-A	1.32 mIU/mL	0.24	Method	CRL Robinson
fb-hCG	40.41 ng/mL	0.93	Scan date	14/05/25
Risks at sampling date			Crown rump length in mm	
Age risk	1:704		65	
Biochemical T21 risk	1:108		Nuchal translucency MoM	
Combined trisomy 21 risk	1:744		0.84	
Trisomy 13/18 + NT	1:3383		Nasal bone	
			present	
			Sonographer	
			N A	
			Qualifications in measuring NT	
			MD	
Trisomy 21				
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 744 women with the same data, there is one woman with a trisomy 21 pregnancy and 743 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!				
Trisomy 13/18 + NT				
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:3383, which represents a low risk.
