

Prisca 5.1.0.17
Date of report: 16-05-2025

NA

Patient data			
Name	Mrs. SONALI AGRE	Patient ID	0372505150100
Birthday	16-03-1995	Sample ID	B2404616
Age at sample date	30.2	Sample Date	15-05-2025
Gestational age	13 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	61.5	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.97 mIU/mL	0.38	13 + 1
fb-hCG	35.2 ng/mL	1.03	Method
			CRL Robinson
			Scan date
			14-05-2025
			Crown rump length in mm
			72.2
			Nuchal translucency MoM
			0.89
			Nasal bone
			unknown
			Sonographer
			NA
			Qualifications in measuring NT
			NA
Risks at sampling date		Trisomy 21	
Age risk	1:650	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1994 women with the same data, there is one woman with a trisomy 21 pregnancy and 1993 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Biochemical T21 risk	1:342		
Combined trisomy 21 risk	1:1994		
Trisomy 13/18 + NT	<1:10000		
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
