

NA

Patient data								
Name	Mrs. SAHATHI	Patient ID	0012505180232					
Birthday	03-01-1996	Sample ID	A1749272					
Age at sample date	29.4	Sample Date	18-05-2025					
Gestational age	11 + 5							
Correction factors								
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown			
Weight	57	diabetes	no					
Smoker	no	Origin	Asian					
Biochemical data								
Parameter	Value	Corr. MoM	Ultrasound data					
PAPP-A	3.26 mIU/mL	1.10	Gestational age 11 + 5					
fb-hCG	49.08 ng/mL	0.96	Method CRL Robinson					
Risks at sampling date								
Age risk	1:674		Scan date 18-05-2025					
Biochemical T21 risk	1:5573		Crown rump length in mm 51.9					
Combined trisomy 21 risk	1:6836		Nuchal translucency MoM 1.37					
Trisomy 13/18 + NT	<1:10000		Nasal bone present					
Sonographer NA								
Qualifications in measuring NT NA								
Trisomy 21								
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. <p>After the result of the Trisomy 21 test (with NT) it is expected that among 6836 women with the same data, there is one woman with a trisomy 21 pregnancy and 6835 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>								
<p>The graph illustrates the calculated risk for Trisomy 21. The x-axis represents age, and the y-axis represents risk. The 'Cut off' line is at 1:10000. The area above this line is red (above cut off), the area between the cut off and the age risk is yellow (below cut off but above age risk), and the area below the age risk is green (below age risk). The age risk curve starts at approximately 1:10000 at age 13 and rises sharply, crossing the cut off line at age 29.</p>								
Trisomy 13/18 + NT								
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
