

Prisca 5.1.0.17
Date of report: 20-05-2025

N A

Patient data			
Name	Mrs. V PADMAVATHI		Patient ID
Birthday	20-03-1993		Sample ID
Age at sample date	32.2		Sample Date
Gestational age	11 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	53	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	2.42 mIU/mL	0.70	Method
fb-hCG	47 ng/mL	0.93	Scan date
Risks at sampling date			Trisomy 21
Age risk	1:459		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 8081 women with the same data, there is one woman with a trisomy 21 pregnancy and 8080 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Biochemical T21 risk	1:1512		
Combined trisomy 21 risk	1:8081		
Trisomy 13/18 + NT	<1:10000		
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
