Dr. Almas Nazim Khan

Consultant Radiologist,

MBBS, M.D. (Gold Medalist)

FRCR (London),

EDiR, MScPhleb (UK)

Regd. No. : 2015/05/2732

| | |
|-------------------------------------|----------------------------------|
| NAME : MRS. AFREEN SHEIKH | AGE/SEX : 33 YR/F |
| REFERRED BY: DR. AALIYA AMREEN MAAM | DATE : 19/05/2025 |
| LMP : 10/02/2025 | |
| EDD BY LMP : 17/11/2025 | Menstrual age - 14 weeks 0 days. |

OBSTETRIC SONOGRAPHY - NT/NB (EARLY ANOMALY SCAN)

Real time, B mode ultrasonography of the gravid uterus was performed.

Route : TAS and TVS

Single live Intra uterine gestation.

MATERNAL : Cervix measured 3.69 cm in length.

| | | |
|-------------------------|------|-----------------------|
| Right Uterine Artery PI | 1.28 | Normal |
| Left Uterine Artery | 2.36 | Normal |
| Mean PI | 1.23 | Normal (22th centile) |

FETUS :

Placenta - FORMING Anteriorly, lower uterine segment, no previa.

Liquor - Adequate

Umbilical Cord - Three vessel cord seen with normal cord insertion.

Fetal Movements - Present

Cardiac activity - Present FHR - 146 bpm

Fetal Biometry :

| PARAMETERS | DIMENSIONS | GESTATIONAL AGE |
|------------|------------|-----------------|
| B.P.D. | 21.8 mm | 14 Wks 6 days |
| AC | 67.3 mm | 13 Wks 3 days |
| FL | 14.2 mm | 14 Wks 1 day |

CRL - 85 mm, 14 weeks 4 days.

ANEUPLOIDY MARKERS :

Nasal Bone : ossified, NBL - 3.28 mm (25.5 percentile)

Nuchal Translucency : 1.51 mm (LOW RISK)

Ductus Venosus : Normal flow (PI - 0.77)

No tricuspid regurgitation.

PTO.

FETAL ANATOMY:

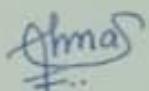

Fetal intra cranium, stomach bubble, kidneys, bladder and limbs to the extent seen at this period of gestation appeared normal.
Retro nasal triangle is normal.
Mandibular gap present.
Situs solitus.
No anterior abdominal wall defect.
No omphalocele.
Four chamber view of heart seen.
Crossing of great arteries visualised.
No obvious structural congenital abnormality noted.

EDD assigned by LMP : 17/11/2025

IMPRESSION:

- Single, Live intrauterine gestation corresponding to gestational age of 14 weeks 4 days.
- Menstrual age is 14 weeks 0 day.
- Nuchal translucency is normal.
- No obvious structural congenital abnormality noted at this stage of gestation.
- Placenta is forming anteriorly.
- Normal mean uterine artery PI values.

Suggested Double marker correlation, follow up for detailed anomaly scan at 18-20 weeks.

DR. ALMAS NAZIM
M.D., FRCR (London)

Disclaimer : Ultrasound investigation has its limitations. Please note that detailed fetal anatomy may not always be visible due to technical difficulties. Also, all fetal anomalies may not necessarily be detected at every examination.

I, Dr. Almas Nazim, hereby declare that while conducting this ultrasound examination, sex of fetus was not disclosed or mentioned to the patient or anybody else in any manner.
