

Patient data			
Name	Mrs. B.PADMA	Patient ID	0312505230008
Birthday	01/01/90	Sample ID	A0833376
Age at sample date	35.4	Sample Date	22/05/25
Gestational age	13 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	42	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	0.18 mIU/mL	0.02	Gestational age 13 + 1
fb-hCG	31.8 ng/mL	0.84	Method CRL Robinson
Risks at sampling date			Scan date 20/05/25
Age risk	1:258		Crown rump length in mm 72.7
Biochemical T21 risk	>1:50		Nuchal translucency MoM 0.77
Combined trisomy 21 risk	1:206		Nasal bone present
Trisomy 13/18 + NT	>1:50		Sonographer N A
			Qualifications in measuring NT MD
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 206 women with the same data, there is one woman with a trisomy 21 pregnancy and 205 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is >1:50, which indicates an increased risk.			

 below cut off
