- No evidence of tricuspid regurgitation.

This scan is not level II scan; this is done only to assess fetal growth parameters fetal weight and fetal well being.

### IMPRESSION

- Single live intrauterine foetus with changing presentation is seen at the time of examination. It corresponds to Gestational age 12 Weeks 3 days. EDD- 07.12.2025 +/- 10 Days.
- Increased bilateral uterine arteries PI (2.78 on right side & 1.84 on left side) with early diastolic notching. Mean PI (2.31) is increased.
- Interval growth appears normal.

### Advice- Anomaly scan at 18-22 weeks.

#### Disclaimer:-

Please note that USG study has certain limitations. Sometimes fetal anomalies may not get diagnosed due to nature of anomaly, Gestational age, fetal positioning and limitations of machine. Thence absence of mention of foetal anomaly in study does not always rule out its possibility. (Fetal anomalies are included in this scan).

**Declaration:** - I declare that while conducting Ultrasonography/ Image Scanning on patient, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.
