

Prisca 5.1.0.17
Date of report: 31/05/25

N A

Patient data			
Name	Mrs. TRIPTI MILANI	Patient ID	0662505300280
Birthday	09/10/86	Sample ID	B2709647
Age at sample date	38.6	Sample Date	30/05/25
Gestational age	12 + 4		
Correction factors			
Fetuses	1	IVF	no
Weight	64	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	0.59 mIU/mL	0.16	12 + 4
fb-hCG	41.2 ng/mL	1.02	Method
			CRL Robinson
			Scan date
			30/05/25
Risks at sampling date			Trisomy 21
Age risk		1:113	The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk.
Biochemical T21 risk		>1:50	After the result of the Trisomy 21 test (with NT) it is expected that among 62 women with the same data, there is one woman with a trisomy 21 pregnancy and 61 women with not affected pregnancies.
Combined trisomy 21 risk		1:62	The PAPP-A level is low.
Trisomy 13/18 + NT		1:76	The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.
			Please note that risk calculations are statistical approaches and have no diagnostic value!
			The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
			The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is 1:76, which represents an increased risk.
