

Prisca 5.1.0.17
Date of report: 05/06/25

N A

Patient data								
Name		Mrs. USHA RANI THAKURIA		Patient ID	0692506020187			
Birthday		06/10/83		Sample ID	B2739621			
Age at sample date		41.7		Sample Date	02/06/25			
Gestational age		12 + 4						
Correction factors								
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown			
Weight	71.3	diabetes	no					
Smoker	no	Origin	Asian					
Biochemical data								
Parameter	Value	Corr. MoM	Ultrasound data					
PAPP-A	0.49 mIU/mL	0.15	Gestational age 12 + 0					
fb-hCG	39.76 ng/mL	1.01	Method CRL Robinson					
Risks at sampling date								
Age risk		1:50	Scan date 29/05/25					
Biochemical T21 risk		>1:50	Crown rump length in mm 56.6					
Combined trisomy 21 risk		>1:50	Nuchal translucency MoM 0.81					
Trisomy 13/18 + NT		>1:50	Nasal bone present					
Risk								
1:10								
								
Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 Test (with nuchal translucency), it is expected that among less than 50 pregnancies with the same data, there is one trisomy 21 pregnancy. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!								
Trisomy 13/18 + NT The calculated risk for Trisomy 13/18 test (with nuchal translucency) is >1:50, which indicates an increased risk.
