

Prisca 5.1.0.17
Date of report: 06-06-2025

N A

Patient data			
Name	Mrs. K. AUNSHA		Patient ID
Birthday	13-10-1998	Sample ID	0212506060007 B2727152
Age at sample date	26.6	Sample Date	06-06-2025
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	43	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.79 mIU/mL	0.34	12 + 2
fb-hCG	43.01 ng/mL	0.86	Method
			CRL Robinson
			Scan date
			06-06-2025
			Crown rump length in mm
			59
			Nuchal translucency MoM
			0.78
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risks at sampling date			
Age risk	1:872		
Biochemical T21 risk	1:476		
Combined trisomy 21 risk	1:3087		
Trisomy 13/18 + NT	<1:10000		
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 3087 women with the same data, there is one woman with a trisomy 21 pregnancy and 3086 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
