## USG OBSTETRIC

L.M.P: 19/03/2024 EDD BY L.M.P.: 24/12/2025

Period of amenorrhea: 12 weeks.

Uterus is gravid.

A single smooth intrauterine gestational sac is seen.

No separation of the gestational sac or any subchorionic hematoma is seen at present scan.

A single fetus is seen inside the gestational sac.

Fetal cardiac activity is seen and appears normal. FHR is 163 bts/min.

CRL is 54 mms corresponding to 12 weeks.

Nuchal translucency measures 1 mm.

Nasal bone is seen. Ductus venosus flow is normal.

Fetal contours appear normal. Skull and orbits appear normal. No abdominal wall defect is seen. Upper and lower limbs, stomach bubble and urinary bladder are seen.

Liquor is adequate. Placenta is forming along posterior uterine wall.

Internal OS is closed. Cervical length is 33 mm.

Right uterine artery PI is 2.08. Left uterine artery PI is 1.25. Mean uterine artery PI is within normal limits for gestational age.

## CONCLUSION:

Single live intrauterine pregnancy corresponding to 12 weeks.

Suggest: Follow up USG for anomaly scan at 19 to 20 weeks.

Many thanks for the reference,

Dr. Harshad Adik (MD Radio-Diagnosis)

Declare that during the examination, I have neither detected nor disclosed the sex of the foetus to any body in any manner.  
all anomalies can be detected on sonography depending upon various factor like gestational age, fetal position, amount of liquor, amniotic fluid thickness, patient co-operation etc.)

Declare that by undergoing ultrasonography / Image scanning etc. I do not want to know the sex of my foetus.  
मैं करण्यात येणारी सोनोग्राफी ही गर्भालिंग निदानासाठी नाही याची मला जाणीव आहे. यासाठी मी स्वेच्छेने संमती देत आहे.
