REPORT ON HISTOPATHOLOGY

Ref. No. ND817/25

Tissue Source:-
Container:1:- Right breast
Container:2:- Axillary lymphnode

Gross Examination:-
Container:1:- Excisional biopsy specimen received measuring 8.0x6.0x3.0cm. Outer surface covered with fat with skin flap measuring 6.0x2.0cm. Cuts soft cut section show solid white area measuring 3.0x2.0cm. Distance of margin from tumour
Superior margin- 2.0cm
Lateral margin- 4.0cm
Medial margin- 1.0cm
Inferior margin- 2.0cm
Base- 2.0cm
Representative section taken

Container:2:- Single fibrofatty tissue received measuring 12x7.0x4.0cm. On serial sectioning eleven lymphnodes identified largest measuring 0.6cm in diameter. Representative section taken.

REPORT ON HISTOPATHOLOGY

Microscopy:-

Sections from solid mass show malignant epithelial neoplasm disposed in sheets and nest infiltrating the stroma and surrounding fat. Individual tumor cells are pleomorphic, larger in size, round to oval in shape, with high nucleo-cytoplasmic ratio, hyperchromatic nuclei, inconspicuous nucleoli and moderate amount of eosinophilic cytoplasm. Areas of hemorrhage and congestion evident.

Section from eleven lymphnodes are free from tumour invasion.

Diagnosis

PROCEDURE:- EXCISION BIOPSY

LATERALITY:- RIGHT

HISTOLOGICAL TYPE:- INVASIVE CARCINOMA OF NO

SPECIAL TYPE (DUCTAL)

NOTHINGHAM GRADE:- 2

TUMOUR SIZE:- 30X20mm

TUMOUR FOCALITY:- SINGLE FOCUS

DUCTAL CARCINOMA IN SITU:- NOT IDENTIFIED

OVERLYING SKIN:- NOT INVOLVED

LYMPHOVASCULAR INVASION:- NOT IDENTIFIED

MICRO CALCIFICATION:- NOT IDENTIFIED

ALL SURGICAL MARGIN:- NEGATIVE

AXILLARY LYMPHNODE:- 0/11 ALL NEGATIVE
