

Prisca 5.1.0.17
Date of report: 26-06-2025

N A

Patient data			
Name	Mrs. GANGAMMA	Patient ID	0352506250032
Birthday	25-06-2004	Sample ID	B2720261
Age at sample date	21.0	Sample Date	25-06-2025
Gestational age	11 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	40	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	0.84 mIU/mL	0.19	
fb-hCG	50.01 ng/mL	0.86	
Risks at sampling date			Gestational age
Age risk	1:1043		11 + 0
Biochemical T21 risk	1:107		Method
Combined trisomy 21 risk	1:585		CRL Robinson
Trisomy 13/18 + NT	1:922		Scan date
			20-06-2025
			Crown rump length in mm
			44
			Nuchal translucency MoM
			0.98
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 585 women with the same data, there is one woman with a trisomy 21 pregnancy and 584 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:922, which represents a low risk.
