Name:	Mr. JAGESHWAR	Age/Gender:	55 Y/M
Ref. By :	Dr. RAJENDRA SHARMA	UHID:	012506260046
Date:	26-Jun-2025	Patient Id:	9882315

HRUSG: NECK

High resolution sonography of neck was performed using 3-10 MHz linear array transducer.
Colour flow imaging was performed in the region of interest.

THYROID GLAND:

- Both lobes of thyroid gland are normal.
- Isthmus is normal.
- No evidence of any tracheal compression is seen.

PAROTID AND SUBMANDIBULAR GLANDS:

- Both parotid / submandibular glands are normal in size, shape and echotexture.

LYMPH NODES:

- Multiple discrete hypoechoic as well as necrotic lymphnodes are seen in right cervical region(level II to V) and in left lower cervical region(at level IV) showing loss of fatty hilum, largest measuring 25.1x15.5mm & few of which forming lymphnodal abscess with surrounding inflammatory changes.

MUSCLES:

- Surrounding neck muscles appear normal. No evidence of any significant sonological abnormality is seen.

VESSELS:

- Scanned bilateral carotid arteries and internal jugular veins are normal.

IMPRESSION:-

- Features are suggestive of bilateral tubercular lymphadenitis with surrounding inflammatory changes as described above.

Adv:- FNAC/CECT neck
