- Internal os is closed. The cervical length is adequate 3.6 cms.

IMPRESSION:

- Single live fetus of average gestational age 19 wks 4 days.
- Uterine artery Doppler screening is negative for preeclampsia.

Note: This scan does not include fetal echocardiography. All congenital anomalies cannot be detected by sonography in single examination as different anomalies manifest at different stages of gestation. Some anomalies are not detected by sonography at all. Anomalies are best detected between 18 - 22 wks.
