

Prisca 5.1.0.17
Date of report: 05/07/25

N A

Patient data								
Name		Mrs. K.SOUNDARYA		Patient ID	0902507040022			
Birthday		03/09/95		Sample ID	A1971276			
Age at sample date		29.8		Sample Date	04/07/25			
Gestational age		12 + 3						
Correction factors								
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown			
Weight	79	diabetes	no					
Smoker	no	Origin	Asian					
Biochemical data								
Parameter	Value	Corr. MoM	Ultrasound data					
PAPP-A	1.01 mIU/mL	0.37	Gestational age					
fb-hCG	42.74 ng/mL	1.08	12 + 3					
Risks at sampling date								
Age risk		1:657	Method					
Biochemical T21 risk		1:279	CRL Robinson					
Combined trisomy 21 risk		1:1826	Scan date					
Trisomy 13/18 + NT		<1:10000	04/07/25					
Risk								
1:10								
								
Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1826 women with the same data, there is one woman with a trisomy 21 pregnancy and 1825 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!								
Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
