Patient data			
Name	Mrs. SHALINI SINGH	Patient ID	0772507100061
Birthday	10-02-1993	Sample ID	B2839999
Age at sample date	32.4	Sample Date	10-07-2025
Gestational age	12 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	63	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.29 mIU/mL	0.32	12 + 4
fb-hCG	38.4 ng/mL	0.98	Method
			CRL Robinson
			Scan date
			09-07-2025
			Crown rump length in mm
			64.3
			Nuchal translucency MoM
			1.46
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risks at sampling date		Trisomy 21	
Age risk	1:455	The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 147 women with the same data, there is one woman with a trisomy 21 pregnancy and 146 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Biochemical T21 risk	1:158		
Combined trisomy 21 risk	1:147		
Trisomy 13/18 + NT	1:919		
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:919, which represents a low risk.
