

PATIENTS NAME : MRS. ASHWINI KINKINE
 AGE : 25 YEARS/ F
 REFERRED BY : DR. S.DODAKE
 EXAMINATION : USG – OBSTETRIC
 DATE : 22 / 06 / 2025

REPORT DETAILS

Realtime sonography of the gravid uterus was performed.

Early Pregnancy

LMP: 30/04/2025

According to LMP the Gestational Age corresponding to 7 weeks 4 days.

Real time USG of the gravid uterus reveals a single live intrauterine gestational sac with e/o fetal pole and yolk sac in present scan.

The fetal cardiac activity is well appreciated.

The fetal heart rate measures 132 beats per minute and is regular in rhythm.

The Crown Rump Length measures 1.1 cm corresponding to 7 weeks 2 days.

The EDD: 06/02/2026

The cervical length is adequate and measures 3.7 cms, no obvious evidence of cervical incompetence.

No adnexal masses are seen on either side.

CONCLUSION:

- Single live intrauterine embryo with gestation age corresponding to 7 weeks and 2 days.

Declaration:- I have neither detected nor disclosed the sex of the fetus of pregnant women to anybody as laid in rule 10 (1A)

Note :-

- 1) This is a Professional Opinion only and not the final Diagnosis
- 2) No ultrasonography finding is pathognomonic, all findings are only suggestive, hence they should be reviewed with the relevant clinical examination & relevant investigations before embarking upon the final Diagnosis and proceeding for Management (Medical or Surgical)
- 3) Not all gross congenital anomalies of fetus are apparent during scanning due to difficult & variable position attained by the fetus. Hence this USG scan cannot exclude all gross congenital fetal anomalies. Fetal cardiac anomalies are not included, ask for fetal echocardiography whenever suspected.
- 4) Whenever suspect congenital anomalies, ask for targeted scan along with serum alpha fetoprotein estimation
- 5) In case of Disparity between clinical and Sonographic/X-ray findings, please send patient again for review
- 6) This report is not valid for medico legal purposes.
