

Prisca 5.1.0.17
Date of report: 11-07-2025

N A

Patient data			
Name	Mrs. TANYA SRIVASTAVA		Patient ID
Birthday	09-05-1995		Sample ID
Age at sample date	30.2		Sample Date
Gestational age	13 + 1		
Correction factors			
Fetuses	1	IVF	no
Weight	58	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.96 mIU/mL	0.37	Method
fb-hCG	36.87 ng/mL	1.02	Scan date
Risks at sampling date			Crown rump length in mm
Age risk	1:646		Nuchal translucency MoM
Biochemical T21 risk	1:327		Nasal bone
Combined trisomy 21 risk	1:2004		Sonographer
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2004 women with the same data, there is one woman with a trisomy 21 pregnancy and 2003 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
