Surgical Pathology Report

Clinical History :

C/O Right thyroid adenoma.

Specimen :

Right hemithyroidectomy for HPE.

Gross :

Received in formalin is specimen labeled as "Right hemithyroidectomy" consisting of right lobe of thyroid measuring 4x3x2cm and part of isthmus measuring 1x0.5cm. Cut surface of right lobe shows nodules filled with thick brownish gelatinous material and tiny grey white papillae in the central area. Representative sections submitted. Sections: (01-04) - Right lobe, 05- Isthmus.

Microscopy :

Sections from right lobe of thyroid show encapsulated tumor composed of papillae showing nuclear enlargement and nuclear overlapping. Areas of nuclear clearing are also seen with some cells showing nuclear grooves. Surrounding thyroid parenchyma show changes of chronic thyroiditis. Adjacent parathyroid gland is unremarkable. No evidence of lymphovascular emboli. No evidence of extra thyroid extension.

Impression : Right hemithyroidectomy;

Encapsulated papillary thyroid carcinoma involving right lobe.

No evidence of lymphovascular emboli.

No evidence of extra thyroid extension.
