Printed On : 23/06/2025 14:18:34

## SONOMAMMOGRAPHY BILATERAL BREAST

### RIGHT BREAST:

A hypoechoic lesion measuring ~ 31x26x33mm with irregular margins and no internal vascularity is noted in the 9 O' clock location of right breast with few micro-calcifications. It shows posterior acoustic shadowing. There is no skin thickening or architectural distortion.

Rest of the right breast shows normal glandular & fatty pattern. The fatty lobules are well differentiated. Retro-areolar region appears normal.

An axillary lymphnode measuring ~ 24mm with preserved fatty hilum.

### LEFT BREAST:

Left breast shows normal glandular & fatty pattern. The fatty lobules are well differentiated. No obvious mass is seen. Retro-areolar region appears normal.

No significant lymphadenopathy is seen in left axilla.

### IMPRESSION:

**BIRADS IV lesion in right breast as described. (Adv- HPE correlation).**

*Please correlate clinically*
