

Date of report: 26-07-2025
Prisca 5.1.0.17

T.AHMAD

Patient data		Ultrasound data	
Name	Mrs. KHUSHBU	Gestational age at sample date	13 + 2
Birthday	15-06-1998	Method	Scan
Age at sample date	27.1	Scan date	22-07-2025
Patient ID	0482507230380		
Correction factors			
Fetuses	1	IVF	no
Weight in kg	51	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Pregnancy data		Parameter	Value
Sample Date	23-07-2025	PAPP-A	5.08mIU/mL
		fb-hCG	35.74 ng/mL
			0.79
			0.98
Risks at sampling date			
Age risk at sampling date	1:875	Trisomy 21	1:3402
Overall population risk	1:600	Trisomy 13/18	<1:10000
Risk		Trisomy 21	
The chart shows a risk curve that starts at 1:10000 at 13 weeks and rises to 1:10 at 49 weeks. A horizontal line at 1:250 represents the cut-off. The area below 1:10000 is green, the area between 1:10000 and 1:250 is yellow, and the area above 1:250 is red. A black vertical bar at 27.1 weeks indicates the patient's risk is below the cut-off.		The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 3402 women with the same data, there is one woman with a trisomy 21 pregnancy and 3401 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!	
Trisomy 13/18			
The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.
