

N A

Patient data								
Name	Mrs. ANJANA DEB ROY	Patient ID	0812507220004					
Birthday	06-04-1986	Sample ID	A0698793					
Age at sample date	39.3	Sample Date	22-07-2025					
Gestational age	11 + 6							
Correction factors								
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown			
Weight	56	diabetes	no					
Smoker	no	Origin	Asian					
Biochemical data								
Parameter	Value	Corr. MoM	Ultrasound data					
PAPP-A	5.32 mIU/mL	1.65	Gestational age 11 + 5					
fb-hCG	48.04 ng/mL	0.97	Method CRL Robinson					
Risks at sampling date								
Age risk	1:93		Scan date 21-07-2025					
Biochemical T21 risk		1:1655	Crown rump length in mm 52					
Combined trisomy 21 risk		1:3284	Nuchal translucency MoM 1.22					
Trisomy 13/18 + NT		<1:10000	Nasal bone present					
Sonographer N A								
Qualifications in measuring NT MD								
Trisomy 21								
<b>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</b> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 3284 women with the same data, there is one woman with a trisomy 21 pregnancy and 3283 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>								
<p>The graph illustrates the calculated risk for Trisomy 21 based on age. The x-axis represents age, and the y-axis represents risk. The 'Cut off' line is at 1:10000. The area above this line is red (above cut off), the area between the cut off and the age risk is yellow (below cut off but above age risk), and the area below the age risk is green (below age risk). The age risk curve starts at approximately 1:10000 at age 13 and rises sharply, crossing the cut off line at age 39.</p>								
Trisomy 13/18 + NT								
<b>The calculated risk for trisomy 13/18 (with nuchal translucency) is &lt; 1:10000, which represents a low risk.</b>
