Name: Mrs. NEELAM
Ref. By : Dr. SHANKUS CANCER HOSPITAL
Date: 23-Jul-2025

Age/Gender: 20 Y/F
UHID: 012507230009
Patient Id: 9885123

HRUSG: NECK

High resolution sonography of neck was performed using 3-10 MHz linear array transducer.
Colour flow imaging was performed in the region of interest.

THYROID GLAND:

- A large irregular heterogeneously hypoechoic solid lesion with few areas show low level internal echoes is seen in left lobe of thyroid gland showing internal vascularity on color doppler, indenting left sternocleidomastoid muscle(which appears bulky with respect to right side) and causing contralateral deviation & compression of trachea with mild surrounding subcutaneous edema.
- Right lobe of thyroid gland appears normal.
- Isthmus is normal.

PAROTID AND SUBMANDIBULAR GLANDS:

- Both parotid / submandibular glands are normal in size, shape and echotexture.

LYMPH NODES:

- Multiple discrete non-necrotic lymphnodes are seen in left upper cervical region(from level II to IV) with maintained fatty hilum largest measuring 16.3x7.2mm.

MUSCLES:

- Rest of the surrounding neck muscles appear normal.

VESSELS:

- Scanned bilateral carotid arteries and internal jugular veins are normal.

IMPRESSION:-

- A large irregular heterogeneously hypoechoic solid lesion with few areas show low level internal echoes in left lobe of thyroid gland as described above- suggestive of TIRADS 4 lesion(likely infective etiology with abscess).
- Multiple bilateral cervical lymphnodes as described above.

Adv:- CECT Neck / Follow up
