Sex : Female

CYTOLOGY REPORT

Cytology No.: 21 /2025

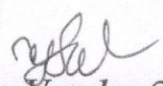

Specimen : Received 5 unstained slides lab elled as FNAC Left breat lump.

Microscopy : Moderately cellular smears studied show singly scattered & loosely cohesive clusteres of ductal epithelial cells. The cells have enlarged nuclei having prominent nucleoli & scanty cytoplasm. Occasional cluster of fibrous stromal fragments are noted. The background is hemorrhagic with mild mixed inflammatory cells.

Impression : Positive for Epithelial malignancy (Suggestive of Infiltrating Ductal Carcinoma) - FNAC Leftt Breast lump

Remark : I) Histopathology is suggested for confirmation.
